

# SUPERVAC

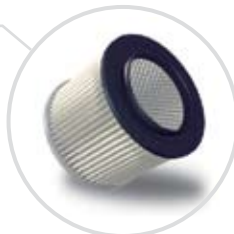

### VacTrack™

Electronically monitors performance and signals when to empty canister and service motor. VacTrack™ is also available in the SuperHose™ handle.

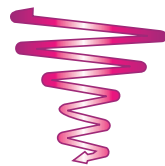

### Ametek Motors

All SuperVac™ units are powered by the leading manufacturer in vacuum motor technology. HAYDEN uses the most powerful vacuum motors available to run on household current.

### High Efficiency Cartridge Filters

The most important component for motor protection. No bags, screens or so-called "self cleaning" systems. Washable filter in the Premier. Advanced re-usable filter in all other models.

### Cyclonic Separation

The most advanced method to separate dust debris. Maintains maximum airflow for continuous cleaning power and longer motor life.

### Injection Molded Canister

High impact, high temperature, flame retardant ABS, will last a lifetime without rusting or denting.
